LOCATION Natal, Brazil → Norway

● Open to opportunities – Remote & Norway-based

// ABOUT

Senior Software Engineer with **10+ years** of experience building scalable, maintainable, and high-performing web applications using **TypeScript**, **Node.js**, **React**, and modern cloud architectures. I thrive in distributed teams, champion clean code, and enjoy designing systems that solve real business problems – from backend microservices to elegant frontends. Currently seeking remote roles with Norwegian-based teams while preparing for a **full-time return to Norway** within the next 6–12 months.

// EXPERIENCE

● **Compass.uol** Oct 2022 – Present

Senior Developer

Natal, Brazil (Remote)

Building a sports event management platform – microservices backend covering tournament registration, athlete subscriptions, and item sales. Includes a trainer mobile app and an admin backoffice for platform management.

Resolved a critical data consistency issue across distributed databases by designing a dedicated replication microservice using the **Saga pattern**. Optimised multiple slow queries improving overall platform performance. Mentoring 2 junior trainees through code reviews and technical guidance on NestJS and TypeScript.

TypeScript NestJS React Microservices Saga Pattern PostgreSQL

Docker AWS

● **Velit Tecnologia da Informação** Nov 2014 – Oct 2022

System Developer

Natal, Brazil

Over 8 years, designed and built a full-stack ERP for the automotive parts industry. Created a custom backend framework, reusable frontend and backend component libraries, and a real-time worker progress tracking system for internal and external mechanics.

Resolved multiple critical production bugs and performance issues. Maintained and extended a legacy Java codebase alongside the modern TypeScript/React stack.

TypeScript React Node.js Oracle DB Java ERP

● **Uni Micro AS** Jan 2005 – Nov 2009

Developer & Technical Support Consultant

Modalen, Norway

Started as a report developer creating custom reports for clients, then progressively took on greater responsibility – moving from Support Level 1 through to **Support Level 3**, where developers resolve issues that L1 and L2 cannot fix.

One of the main developers behind the company's **live update distribution system** – a solution that automated and simplified how ERP updates were
